## Forum change bugs

Posted by admin - 2007/08/11 09:58

---

It seems there were a few bugs in a new forum I installed last night so I have gone back to the old version...

Sorry to those who posted so you might like to repost.

The reason for the change was that the current forum will no longer be supported with the site software so I was looking for an alternative. There must be some conflict with something else on the site so until I can find the solution it's back with the old version.

Think I have solved part of the problems with this new forum but there is still an issue with login/out which I am investigating.

If anyone is experiencing problems with this new forum design, please let me know.

The whole site has now been moved away from it's original hosted service which had fallen behind the times and could not support the latest security features. Much of the site had to be updated (in particular the forum) to accommodate the security upgrade but it now means we are good for the foreseeable future.

There were a few hiccups in the move but hopefully I have found them all.

Please don't hesitate to report any problems you may find though.

Hi Admin, I've been experiencing a few login issues. I put my username and password in correctly, but when I hit return or click both disappear and it looks as if I'm logged out. When I then click on another page however (such as forum) my login and avatar appear and I can post etc. Before that I was being logged out every time I clicked on another page, but that does seem to have stopped. I'm sure you'll iron out all these little issues soon enough

PS just got logged out when I tried to post this message but luckily I had copied to clipboard (just in case!!)  
:laugh:

Thanks Mark,

There seems to be an issue depending on if you access the site as [www.thewesternshop.com](http://www.thewesternshop.com) or just [thewesternshop.com](http://thewesternshop.com) !!!

I have made a couple of changes and it now works for me either way... let me know people if you have any similar problems.

Well it seems there was one bug I overlooked :whistle: I have not received email on the webmaster at [thewesternshop.com](http://thewesternshop.com) address. If anyone has sent me an email in the last week could you please resend it. It may be the reason I have not replied... sorry for the big boo boo. :silly:

Wondered what I had done to upset you!

Have emailed you again, but there seems to be a glitch in downloading pictures on to websites. Can do text though, also getting siteadvisor warnings all the time.:blink:

---

Thanks, I have found the error and hopefully it should all work now. But as always let me know if you find something not working.
